DIGITAL PALESTINE

AI Features Policy

Version: 2.0
Effective Date: 1 November 2026
Last Updated: 1 November 2026
Applies To: All members worldwide

Where Digital Palestine uses artificial intelligence, and what happens to your content

> **In short**
> We use AI to translate content between languages. When you tap "Translate with Thaura", the text is sent to Thaura, our AI translation provider, to be translated. Nothing is sent to Thaura until someone taps "Translate with Thaura", and you can use everything else on Digital Palestine without it.

1. AI FEATURES AT A GLANCE

Feature	What it does	What is sent	Who runs the AI
Translate with Thaura	Translates a post, comment, story, village history or message into your language when you tap "Translate with Thaura".	Only the text of the item you chose to translate.	Thaura, an outside AI provider.
Community translation	Translates community and village information in advance so it is ready in each supported language.	Public community text only. Never private messages.	As above.

- This table describes every AI feature on Digital Palestine at the date above. If we add a new one, we will update this policy before it goes live.

2. TRANSLATION

2.1 When you tap "Translate with Thaura", the text of that item is sent to Thaura, which returns a translation. Thaura is an outside provider that runs a large language model. Nothing is sent until you tap the button, except for public community information that we translate in advance.

2.2 This includes private messages. If you translate a message someone sent you, the text of that message is sent to Thaura. A translation can only be seen by people who can already see the original.

2.3 We store each translation so that the same text does not have to be sent again. Stored translations are deleted when the original content is edited or deleted.

2.4 We send only the text to be translated. We do not send your name, your profile, your location or your contacts with it. We do not use translation to build a profile of you or to target you with anything.

2.5 Thaura processes the text on servers in the European Union. It does not use it to train its AI and may not use it for any other purpose.

2.6 Machine translation can be wrong, particularly with dialect, poetry, names and places. The original is always one tap away. Do not rely on a translation for anything important without checking the original.

3. YOUR CHOICES

- Translation is optional. Nothing is sent to Thaura unless you tap "Translate with Thaura" on a post, comment, story or message.
- The option names the provider, so you always know the text is going to Thaura.
- If you do not use translation, every other feature works as normal.

4. AI CONTENT MADE BY MEMBERS

4.1 Rules about AI-generated images, video and audio that members share are in the Moderation Policy and the Child Protection Policy. In short: realistic AI media must be labelled, deceptive fakes may be removed, and sexual imagery of children is prohibited whether real or generated.

5. PRIVACY AND CONTACT

5.1 The Privacy Policy explains our legal basis for this processing, how long data is kept, international transfers, and your rights. Questions about AI features: support@digitalpalestine.com.
